

HortiMaX P-Plus Version 2011

- Faster correction of invalid input
- More smart filters to compare data
- Tracking and tracing supported

Achieve better results now

HortiMax P-Plus has ranked among the top labour registration systems for years. To remain at the top, we work continuously to improve our products. A number of new features have been added to P-Plus version 2011 based on customer feedback and requirements.

Piece wages feature expanded

In P-Plus version 2011 or higher, you can modify the way in which piece wages are calculated. The following piece wage calculations are supported: *per activity per day*, *per activity per week*, *per activity groupper day and per activity groupper week*. If an employee performs below the minimum wage on a particular registration and above the minimum wage on another registration, the difference between the piece wages earned and the minimum wage is compensated with the piece wages earned above the minimum wage.

Faster correction of invalid input

P-Plus 2011 includes additional norms which allow you to spot and correct invalid data more quickly. These norms are 'time/registration' and 'kg/hour'.

The following smart filters have been added to compare data:

- **Input – Registrations – Modify with Glasshouse in View** - P-Plus version 2011 or higher allows you to filter employees with the Glasshouse in View feature, so you can see which rows an employee has completed.
- **Reports – Activities by Day / Costs and Norms** - Reports now include an option which allows harvesting registrations without yields to be filtered out. As a result, the Kg/hour column no longer takes into account the duration of harvesting activities without yields. This keeps the performance averages of employees (or 'norms') accurate. When you save the 'Activity by Day' report in Desktop Management, the filter options you've selected are saved too.
- **Reports – Other – Costs and Norms** - When you save the Costs and Norms report in Desktop Management, the filter options (e.g. employee / activity / block / row filter) you've selected are saved too.
- **Reports – Other – Time Worked by Period** - The 'Temp Number' input field has been added to 'Employee Basic Data'. The number entered in this field is shown in the 'Time Worked by Period'

report. P-Plus version 2011 also enables you to filter on employees or glasshouse blocks. As a result, employees who've performed below the norm are highlighted in red and those who've performed above the norm are highlighted in green. The norm thresholds and the employee filter can also be saved in Desktop Management.

The 'Activity by Day' report is often shown in the canteen. If TV screens with a low resolution are used, many of the columns are disabled. The 2011 version lets you reduce the size of the report, so only the employee ID number, employee name and norms are displayed. In this way, more reports fit on the screen.

P-Plus Tracking and Tracing

P-Plus 2011 includes the P-Plus Kortho Graphic Jet printer interface, which works in combination with a Kortho printer. Vine tomato growers with fixed weighbridges and the P-Plus Harvest Trolley Monitor can already keep track of which employees filled which boxes of tomatoes. This information – along with the date and time – can now also be printed on the boxes.
