

FertiMiX 400

- Reliable, state-of-the-art design
- Optimum fertigation control
- For all ebb/flow and simple recirculation applications
- Extensive setting options
- Excellent after-sales support

Effectively Manage Recirculation and Ebb/Flow Systems

The FertiMiX 400 is the right choice if you are looking for a system which allows you to effectively manage your ebb/flow systems or simple recirculation applications. The FertiMiX 400 ensures that your crops receive the correct amount of water, at the correct times and with the correct blend of nutrients. Thanks to its many configuration options, the FertiMiX 400 can be tailored to the exact needs of your nursery or greenhouse application.

HortiMaX
growing solutions

FertiMiX 400

- Up to 128 valves
- eight valve groups
- Up to four valves operating simultaneously
- Starts:
 - Time start
 - Contact start
 - Manual start
 - Radiation start (optional)
 - Radiation influence on EC control (optional)
- Reuse drain water or recirculated water based on EC

Highly Accurate Mixing

One of the main functions of the FertiMiX 400 is to mix water and nutrients. The engineering design of the mixing tank guarantees that this is always done correctly, regardless of the specific fertilizers used. The unit can simultaneously dose fertilizers from up to four tanks, in any ratio required. Regardless of whether you work with compound or simple fertilizers, the FertiMiX 400 will create the mixture you need in no time at all. It is also possible to dose additional substances, such as crop protection agents.

The FertiMiX 400 is equipped with the HortiMaX Aqua 400 process computer. The Aqua 400 includes the ability to control 20 irrigation valves, divided among eight valve groups. This can be expanded to 128 valves. The FertiMiX 400 also enables drain water or recirculated water to be collected and reused based on the EC level.

Easy to Operate

The FertiMiX 400 offers a wide range of options to initiate irrigation events, such as manual starts, cyclic starts, radiation starts and contact starts – all of which are easy to program. The FertiMiX 400 can also be operated using a PC and the Synopta® software or, remotely, using a Pocket PC and Pocket Synopta®. The latter enables you to control the fertigation processes in your greenhouse from any location.
